

Congratulations!

You have purchased the world's finest air filter. The patented CorrectFilters system was developed to provide you and your comfort systems with the maximum protection against airborne contaminants. Your new air filter was custom made, by hand, to fit your system. With proper care, it will last you a lifetime.

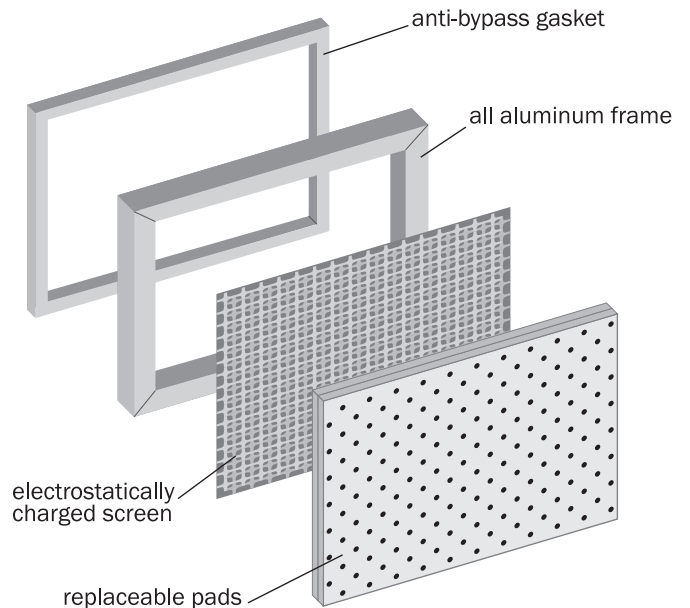

Installation

Return air grill

1. Remove aluminum air filter frame from plastic package.
2. **Ceiling locations only:** Install white spacers (included) on all four corners of the filter on the side with no gasket. This prevents the filter from moving.
3. Place filter into grill with the pad facing outward and the rubber gasket inside the grill.
4. Close the grill and record the replacement date on this manual.

Furnace/Air Handler

1. Remove aluminum air filter frame from plastic package.
2. Install the filter into the system, so that the air enters the pad first and leaves through the plastic mesh.
3. Record the replacement date on this manual.

Changing Inserts

1. Remove soiled pad by lifting a corner and rolling the pad up. Dispose of the rolled up pad.
2. Place a new pad over the frame, printed side facing you.
3. Using a pushing motion, insert the pad into the frame tucking in the edges as you go around the perimeter.

Pad Replacement Schedule

Correct Plus	Correct Pleat	Activated Carbon	Zeolite
Every 60 Days	Every 90 Days	Every 90 Days	Every 90 Days

Replacing your filter pads, as recommended, will reduce electrical consumption and extend your equipment life. We will send you a reminder by e-mail or phone.
